

REALMSOUND

Cinematic ambience & soundscape generator

Quick Start Guide · Version 1.0 · Standalone & VST3 for Windows

Made by Mululа VGM Loops

Quick start

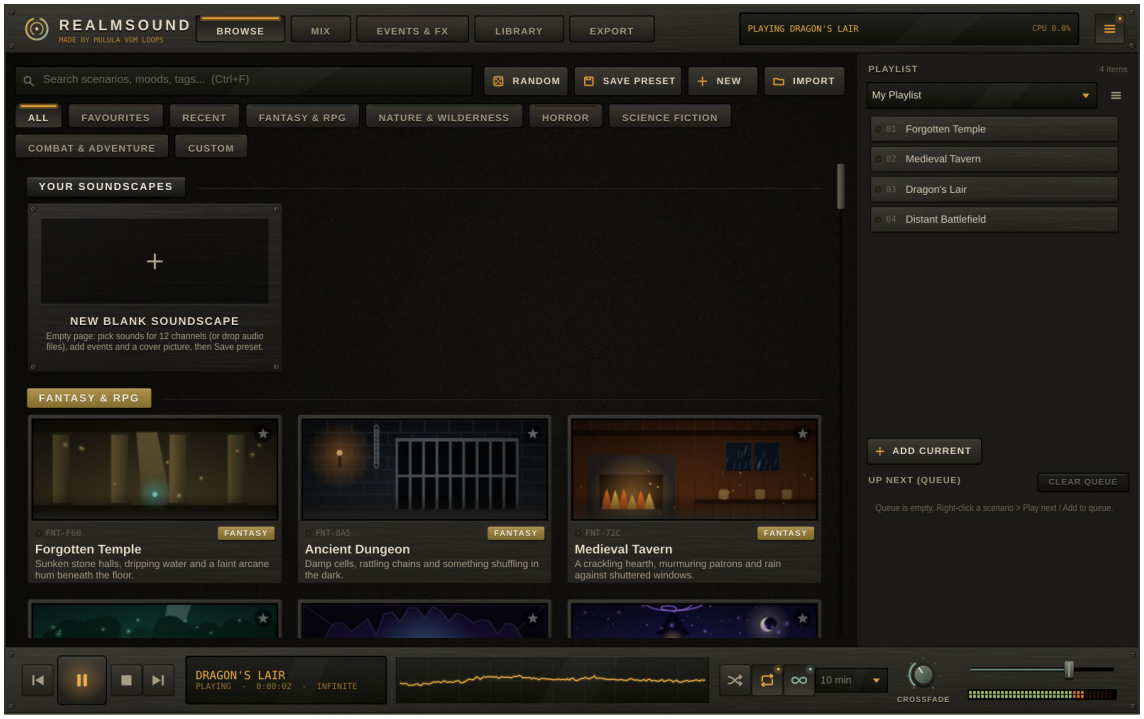

From installing RealmSound to your first export in a few minutes. For every detail, see the full user manual.

1. Install

1. Run **RealmSound-1.0.0-Windows-x64-Setup.exe**. If Windows shows "Windows protected your PC", click **More info** and then **Run anyway**.
2. Choose **Full** to get both the standalone app and the VST3 plugin, then follow the steps.
3. Open **RealmSound** from the Start menu. Your 7-day free trial starts now, with every feature.

2. Your first sound in 30 seconds

1. The **Browse** tab shows all 61 scenes. Use the category buttons to filter them.
2. **Click a card**, for example **Medieval Tavern**. It starts playing and never stops by itself.
3. Press **Space** to pause. Click another card and RealmSound crossfades to it.

Browse: click a card to play it. The playlist and the queue are on the right.

> **Tip:** Click **+** on a card to add it to the playlist. Right-click a card for Play next, Export as WAV, Duplicate and more.

3. Make it yours

The **Mix** tab has one channel for every sound in the scene, up to 12. Turn **Intensity** up for more rain, more fire or a louder crowd, and use **Tone**, **Character** and **Movement** to change how it sounds. Drag the dots on the **Sound stage** to move sounds left or right, closer or further away.

Mix: channel strips on the left, the sound stage and the master section on the right.

The **Events & FX** tab sets the **mood** (Calm, Normal, Intense, Chaotic) and the random events: how likely each one is, how often it can happen, how loud it is and how much its pitch changes. Click the speaker icon to hear an event now. **Add event** offers 43 built-in events, or any sound from your library.

When you like it, click **Save preset** (Ctrl+S). Your presets appear under **Your soundscapes** in Browse.

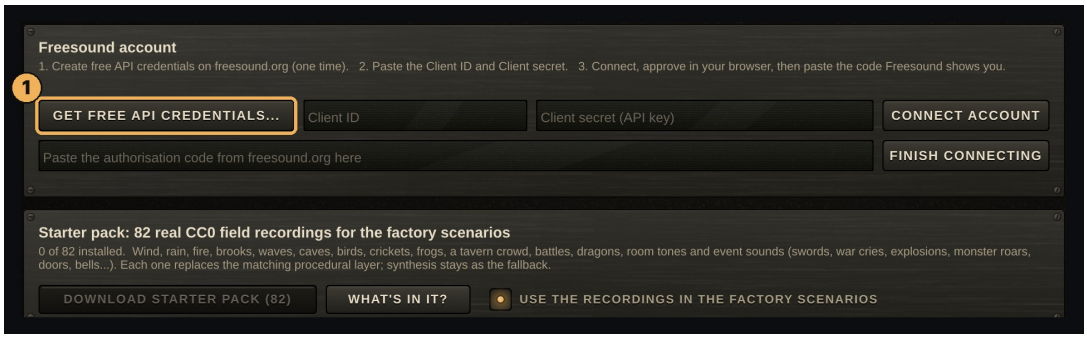

4. Real recordings: connect Freesound (CC0)

Optional, but it makes the scenes sound even more real. RealmSound downloads a starter pack of 82 hand-picked CC0 (public domain) recordings from Freesound with **your own free account**. Without it, every sound plays its synthesized version.

You need: a free Freesound account and about 5 minutes. You do this once; RealmSound stays connected afterwards.

Step 1 Open the Freesound page in RealmSound

Go to the **Library** tab, then **Freesound (CC0)**. Click **Get free API credentials...** (1). Your browser opens `freesound.org/apiv2/apply`. Log in, or create a free account first.

Library › Freesound (CC0), not connected yet.

Step 2 Create your API credentials on freesound.org

Fill in the form like this, accept the terms and submit it:

Field on freesound.org	What to type
Name	RealmSound
Description	Anything short, e.g. *Ambience app on my computer*
URL	Leave it empty
Callback URL	`https://freesound.org/home/app_permissions/permission_granted/`
Terms of use	Tick the box to accept them

Freesound then shows a table with your new credential. Keep that page open: you need the **Client ID** and the **Client secret / Api key**.

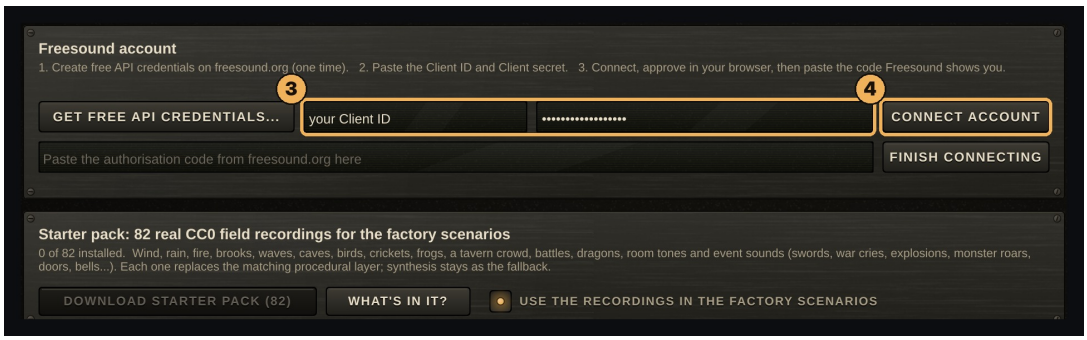

> **Important:** The Callback URL must be exactly the address above. It makes Freesound show you a code in Step 5. If you get no code later, edit the credential on freesound.org/apiv2/apply and fix this field.

Step 3 Paste your keys into RealmSound

Copy the **Client ID** into the first box and the **Client secret** into the second box (3).

Step 4 Click Connect account

Click **Connect account** (4). Your browser opens a Freesound page asking you to approve RealmSound.

Keys pasted (the secret is hidden with dots), ready to connect.

Step 5 Approve on freesound.org

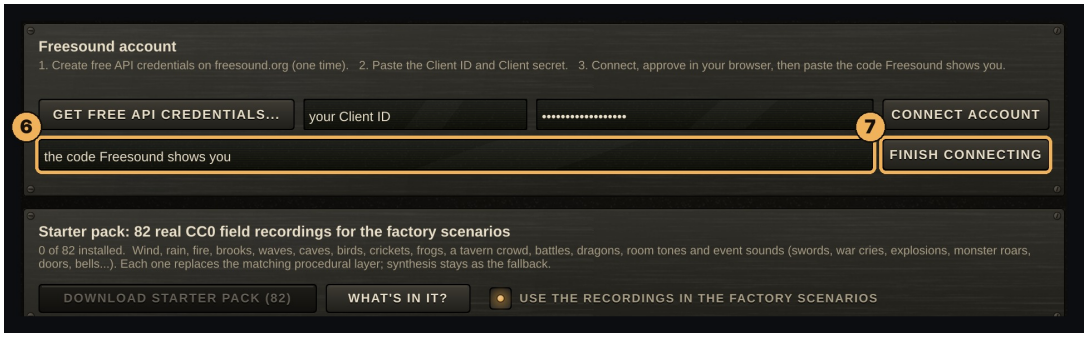

Click **Authorize!**. Freesound shows a short **authorisation code**. Copy it.

Step 6 Paste the code

Back in RealmSound, paste the code into the long box (6).

Step 7 Click Finish connecting

Click **Finish connecting** (7). The code works once and expires after 10 minutes; if it is refused, start again at Step 4.

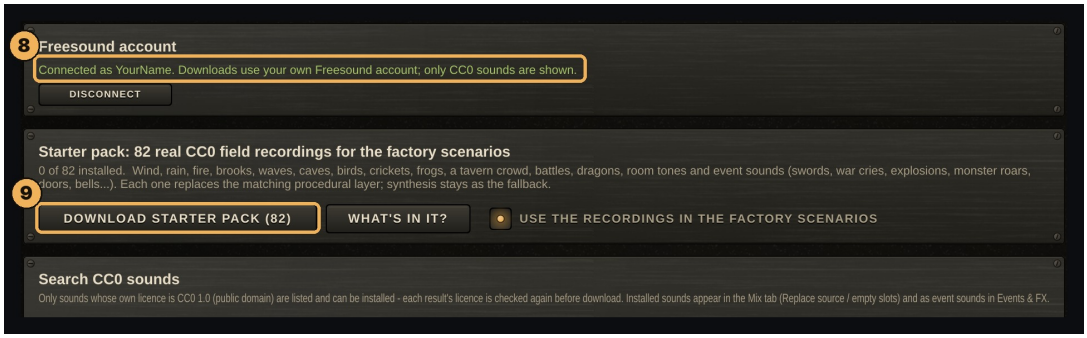

Code pasted, ready to finish.

Step 8 You are connected

The card turns green: **Connected as** *your Freesound name* (8). Only CC0 (public domain) sounds are shown and installed.

Step 9 Download the starter pack

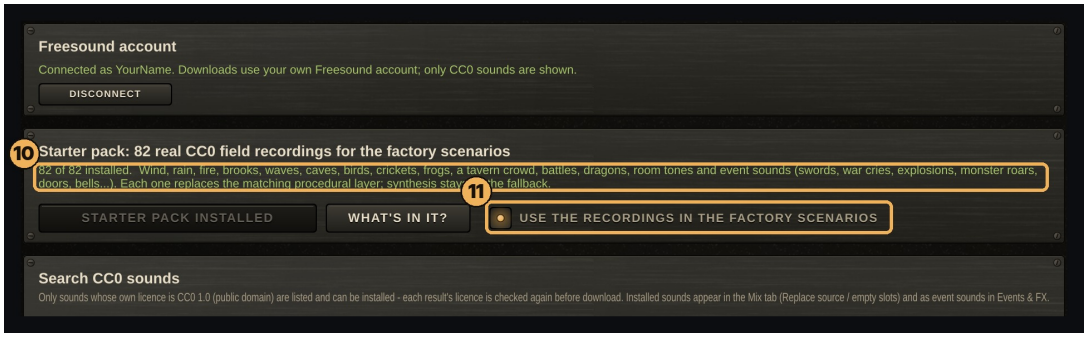

Click **Download starter pack (82)** (9). It is about 670 MB. Freesound allows 30 downloads a minute, so RealmSound fetches one sound every few seconds and waits by itself if Freesound asks it to slow down. Leave RealmSound open until it finishes.

Connected. The starter pack button is now active.

Step 10 Done

When it says **82 of 82 installed** (10), the factory scenes play the real recordings automatically. Untick **Use the recordings in the factory scenarios** (11) if you want pure synthesis again.

Starter pack installed.

If this happens	Do this
Freesound shows no code after Authorize!	Fix the Callback URL of your credential (Step 2), then click Connect account again.
"Invalid grant" when finishing	The code expired or was already used. Click Connect account again and use the new code.
Some downloads failed	Click Download starter pack again: it only fetches the missing sounds. A pop-up and the file download_log.txt list the reasons.
You want to disconnect	Click Disconnect. Your downloaded sounds stay installed.

Your account stays yours: RealmSound never asks for your Freesound password; you log in on freesound.org itself. Your keys and login are saved only on your computer, in your RealmSound settings.

5. Export a WAV or a seamless loop

1. Open the **Export** tab. Choose the length, sample rate and bit depth.
2. For games, tick **Seamless loop**: the end of the file flows into its start, with loop points embedded in the WAV.
3. Click **Render WAV**. The log shows a **Loop check**; then click **Show in folder**.

Export: seamless loops, any length, 16 or 24-bit up to 96 kHz.

6. In your DAW

- Rescan plugins and insert **RealmSound** on an **instrument** track. It needs no MIDI.
- Turn on **Follow host transport** (Events & FX) so it starts and stops with your DAW.
- Master volume, intensity, randomness, density, mood, effects and the 12 channel levels can be automated.

7. Trial and licence

- The trial lasts 7 days with every feature. After that, playback still works, but export and saving presets are locked and a session stops after 15 minutes.
- Buy RealmSound for **US$49.90** at **lovacbeat.gumroad.com/l/RealmSound** (or click the trial button at the top right).
- Paste the licence key from your Gumroad receipt and click **Activate**. One key works on up to 5 computers; after activation RealmSound works offline.

Keyboard shortcuts

Key	Action
Space	Play / pause
Ctrl + → / Ctrl + ←	Next / previous scene
Ctrl + R	Random scene
Ctrl + S	Save preset
Ctrl + F	Search
Ctrl + 1 … 5	Switch tabs

Quick fixes

Problem	Try this
No sound (standalone)	Options › Audio/MIDI Settings: choose your output device. Check the master fader.
Clicks or dropouts	Raise the buffer size to 512 or 1024 samples.
Plugin not found in the DAW	Rescan plugins. The file is in C:\Program Files\Common Files\VST3.
Window too small or too big	Drag the bottom-right corner: the whole interface scales.
